                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Best Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents the Varicelia-Zoster virus (VZV) open reading trame 29p (ERF29p) protein. Although orR29p is the major DNA binding protein or VZV, the invention is based on the discovery that the VZV orF29p protein can readily enter and exit eukaryotic cells. Accordingly, the invention relates to a composition for delivery of an agent into a eukaryotic cell. Comprising the VZV OrF29p protein bound to the agent into a eukaryotic cell. Comprising the VZV OrF29p protein bound to the agent to be delivered. The agent delivered may be a polypeptide, a polymericotide, or an organic compound. The invention also relates a composition in which the OrF29p protein is linked to a lipid membrane, and lipid vesicles containing this composition. The invention additionally relates to the use of the OrF29p protein as a facilitator of secretion of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    a desired protein, in which the desired protein and the ORF29p protein are tremmbliantly expressed as a fusion protein. The invention further encompasses nucleic acids encoding the VZV OFF29p protein and their use in detection of VZV OFF29p nucleic acids, and a monoclonal antibody adainst the ORF29p protein. Compositions of the invention are useful for the delivery of a prophylatetic or therapeutic agent to a cokaryctic cell, particularly a human cell. Examples of agents that can be delivered to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antineoplastic, antidiabetic or immunosuppressive drugs).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cell include proteins such as insulin, factor VIII, factor IX, and proteases: polynucleotides (e.g., for use in gene therapy), and organic compounds such as vitamins and a wide variety of pharmaceutivals (e.g.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 1; Fig 6; 68pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents a Herpes simplex virus type-2 (HSV-2) protein sequence of the invention. This sequence was isolated from a HSV-2 strain SB5 (deposited as ATCC VK-2546) LNA fragment designated Courty ID 12. The proteins can be used for the treatment or prevention of disease, to induce an immunological response in a mammal or to identify inhibitors, activators or novel antivirals. Antagonists of the proteins can be used to inhibit a viral polypeptide. The DNA sequence or a vector containing it can also be used to induce an immunological response in a mammal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 10; Page 83-84; 748pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                activators or novel antivirals. Antagonists of the proteins can be used to inhibit a viral polypeptide. The DNA sequence or a vector containing it can also be used to induce an immunological response in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents a Herpes simplex virus type 2 (HSV 2) protein sequence of the invention. This sequence was isolated from a HSV-2 strain SH5 (deposited as AICC VR-2546) by trainent designated Contig ID 15. Based on homology, this sequence is a major DNA-binding protein. The proteins can be used for the treatment or prevention of disease, to induce an immunological response in a mammal or to identify inhibitors,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 10; Page 123; 748pp; English

                                                                                                                                                                          sequence of the invention. This sequence was isolated from a HSV 2 strain SB5 (deposited as ATCC VR-5346) LNA fragment designated Contig ID 15. Based on homology, this sequence is a major DNA-binding protein. The proteins can be used for the treatment or prevention of disease, to induce an immunological response in a mammal or to identify inhibitors, activators or novel antivitals. Antagonists of the proteins can be used to inhibit a viral polypeptide The DNA sequence or a vector containing it can also be used to induce an immunological response in a mammal.
                                                                                                                                             Sequence

               encoding a peptide consisting of one of ten amino acid sequences defined in the specification or homologues of these sequences. The nucleic acid molecules are useful for producing peptides important in the regulation and function of herpes virus replication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the consensus while, if necessary, altering (by the insertion of spaces or the deletion of residues) the spacing of the homologue; and (3) generating a distribution of 1500 random sequences of amino acids between the initial and terminal residues and identifying the percentage of aligned residues. The recombinogenic motifs may be useful in the production of vaccines and in gene therapy to treat allergies, autoimmune diseases, cardiovascular diseases, graft rejection, the contents of the co
                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid molecules encoding peptides with transposase activities, useful as immunosuppressants, anti-viral agents, or vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Varicella zoster virus; VZV29; herpesvirus; D35E; anti-viral; immunosuppressant; immunostinulant; cytostatic; anti-allergic; cardiant; anti-inflammation; gene therapy, infection, herpes virus repileation; anti-inflammation; retroviral integrase; (VD)J recombination; retroviral integrase; fimmunoglobulin class switching; allergy; autoimmune disease; cancer; cardiovascular disease; graft rejection; haematopoietic disorder; cardiovascular disease; graft rejection;
                                                                                                                                                                 The present sequence is provided in a specification relating to a isolated nucleic acid molecule comprising a nucleic acid sequence

The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 9; Page 197-198; 3ulpp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated Enterococcus faecalis polynucleotides - used to develop products for the detection of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus infection {\sf Constant}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Products from the present invention can also be used for screening compounds to identify agenists and antagonists of {\tt E}. faecalis protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequences can be used for detecting Enterococcus nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a protein isolated from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides the protein and coding sequences of a number of polypeptides from Enterococcus faecalis. The proteins can be used as vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal, particularly E. taecalis. The polynuclootide is also useful for preventing or treating E. taecalis infection. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New genes and polypeptides from Enterococcus faccalis, useful as vaccines for preventing, treating or attenuating an infection caused by among the Enterococcus genus in an animal, particularly E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

The proteins can be used as vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal, particularly E. faecalis. The polynucleotide is also useful for preventing or treating E. faecalis infection. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Choi GH, Bailey С,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ş
          cc upregulated by about 3 fold in cells subjected to mechanical strain.

CC The specification describes a method for the identification of genes

CC responsive to a specific mechanical stress. The method comprises applying

CC the mechanical stress to an organism (tissue or cells comprising bone

CC colis), isolating the specific cellular fractions and extracting mRNA

CC from them, and differentially analysing the mRNA in comparison with

CC control samples. The method is used to identified genes whose expression

CC is responsive to a specific stress. The identified genes are employed in

CC determining risk associated with a physiological or disease state. The

CC invention, are used for treating a medicament for gene

CC invention, are used for treating or controlling a

CC physiological or disease state (especially osteoporosis or bone density

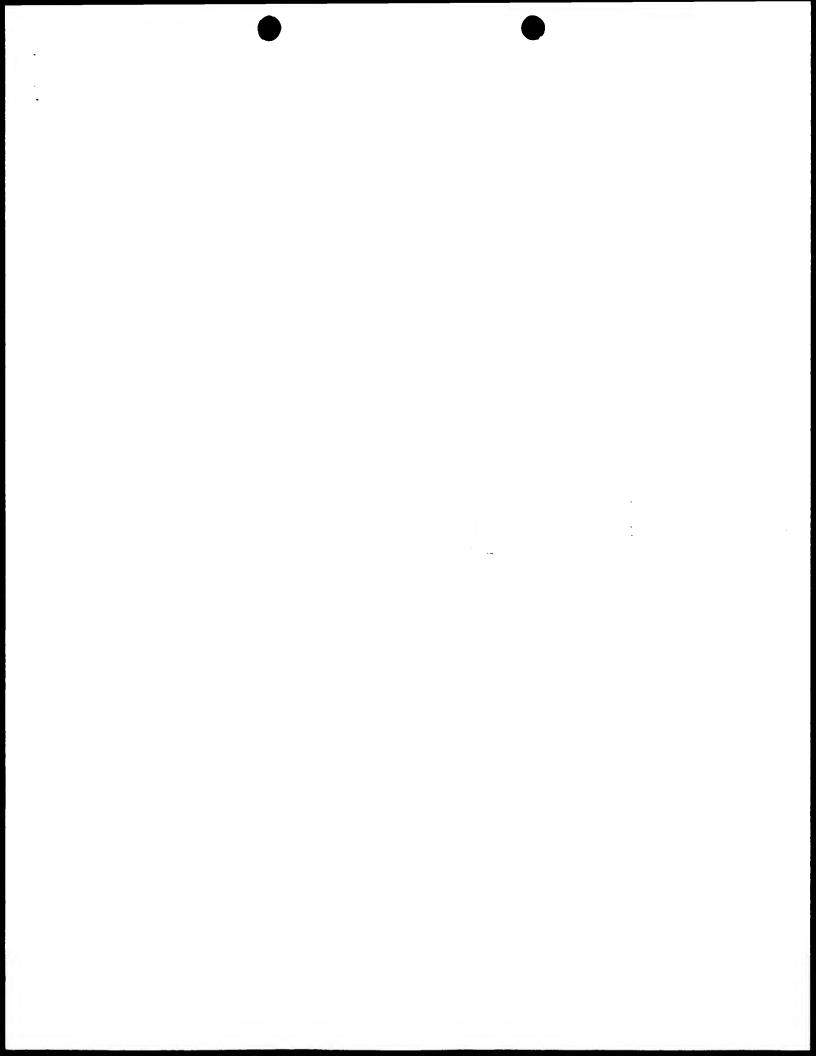

CC or other factors causing or contributing to osteoporosis or its symptoms

CC methods can also be used for advancing research or studies in bone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /note* "encoded by GGA" Misc-difference 1453

NESULT 10
US-07-731-157A-7
Sequence 7, Application US/07731157A
Sequence 7, Application US/07731157A
Patent No. 5457032
GENERAL INFORMATION:
GENERAL INFORMATION:
MISSET, Onno
APPLICANT: Misset, Onno
APPLICANT: Van der Laan, Jan M.
APPLICANT: Lenting, Herman B.M.
INFLICANT: Lenting, Herman B.M.
ITITLE OF INVENTION: Mutated beta-lactam acylase genes
